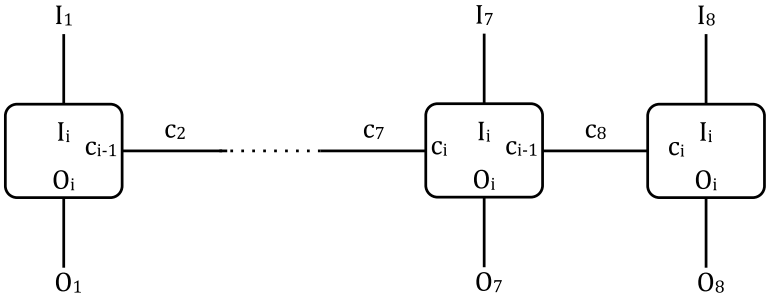
kar/manyinputs-03

4.4 Transmission based on Priority

Possible with an iterative blocschema.



kar/manyinputs-04

4.5 Logic for Counter without decreasing to Zero

The solutions involves an Adder **`x+1`** and a Comparator to **`0xFFFF`**

kar/manyinputs-05

4.6 Adder with Saturation

The output c_{out} of an iterative adder indicates an overflow.

kar/manyinputs-06

4.7 BCD coded numbers

The BCD-Adder is a special case of a normal adder. Only the values between 0...9 exist. Therefore $c_{\text{out}} = 1$ if the sum is > 10. In this case -10 has to be substracted from the output.

kar/manyinputs-07

4.8 Majority function with 7 inputs

A concatenation of adders with a comparison

kar/manyinputs-08

4.9 Arithmetic and logical unit

First determine the schema of an adder and that of a subtractor, tie them together and create the logical functions.
